DM30 DUSTSENS PARTICULATE MONITOR

DUSTSENS

The DM30 Dustsens particulate monitor is an automated air quality sensor for measuring PM10, PM2.5 and PM1. Designed for applications that require accuracy, reliability and simple operation.

MCERTS certified for PM10 and PM2.5

The Dustsens provides continuous monitoring of outdoor dust levels. Measurements are uploaded in real time to the Sonitus Cloud platform for automatic analysis, reporting and compliance checks.

ENABLING BETTER ENVIRONMENTS FOR PEOPLE TO LIVE AND WORK

HIGHLIGHTS

Simultaneous measurement of PM10, PM2.5 and PM1

Automated measurement, upload and analysis with reports straight to your inbox

Heated air inlet to control moisture in the air. User options to adjust power consumption

Online reporting through the Sonitus Cloud with email and text alerts. Check compliance with limits from anywhere at anytime

Mains, battery and solar power options with low power mode for long term monitoring

All real time data is automatically pushed to the Sonitus Cloud platform, hosted on secure servers. Export options using API or FTP are available for integration with other systems

Ready to deploy with minimum effort on site. Low maintenance and simple calibration

Rugged design with consistent performance in a range of weather conditions

SPECIFICATIONS

PARTICULATE MEASUREMENT

PARAMETERS PM10, PM2.5 and PM1

METHOD Optical particle counter

MEASUREMENT

RANGE

up to 2000 μ g/m³

PARTICULATE RANGE 0.35 to 40 μm

LOGGING

MEASUREMENT PERIOD 1, 5, 10, 15 or 30 minutes Hourly and 24 hour

averages online

DATA STORAGE 3 years on-board

memory

PROCEDURE Automatic measurement

and logging

POWER REQUIREMENTS

MAINS POWER SUPPLY

110V - 240V AC

CONSUMPTION 24W with heater at full

power

MAX. CURRENT 2A at 12V

COMMUNICATIONS

WI-FI For user interface

4G MODEM & SIM Supplied inside

each monitor

USER INTERFACE Accessed using a

standard web browser

PHYSICAL

DIMENSIONS 430 x 410 x 185mm with

185mm inlet

WEIGHT 12kg

OPERATING TEMP. -10 to 50°C

HUMIDITY RANGE 0 to 95 % RH

FEATURES AND OPTIONS

Heated inlet with power control

The heated inlet reduces moisture in the sampled airflow to give more consistent and accurate measurements. The heater power can be adjusted to suit the environmental conditions and to save power.

Add wind sensors

Capture all relevant environmental parameters with an ultrasonic wind sensor to measure wind speed and direction.

Add noise monitoring

The Dustsens is built on the same rugged technology as our sound level monitoring systems. Combine noise and dust into a single station to save costs, power and hassle.

Low downtime for calibration

The low-maintenance particulate sensor can be swapped out quickly with a pre-calibrated module. This significantly reduces the downtime on site.
